

Microblading

Microblading is semi permanent eyebrow artistry. Also known as Feathering this procedure has quickly become a world leader in the beauty industry with many women and men choosing Microblading over mainstream tattooing methods of the past. Mainly because the results are just so natural. The treatment creates fine hair like strokes to fill, enhance and improve the shape of your natural eyebrows, creating a natural beautiful result. Using a pen like tool outfitted with up to 16 microscopic needles, adding specialise pigments to the skin. A topical anaesthetic is also used for your complete comfort. The technique of Microblading is a kind of shallow tattoo, where the fine hair like strokes are placed within the epidermis and subcutaneous layers of the skin. This skill prevents blurring & discolouration that can occur with traditional tattooing methods that penetrate the dermal layer of the skin. All tools are disposable and sterile packed. You will need 2 treatments and in rare cases 3. They can be spaced 4-6 weeks apart as your eyebrows need to fully heal between sessions. Allow 2-2.5 hours for your treatment, it may not take this long, but is intended so we do not have to rush perfection. During your treatment we will plan, discuss & design your brow enhancement with you, as well as covering all contraindications and precautions associated with Microblading. This is a very safe procedure that creates stunning results.

Microblading

Treatment 1 ~ \$290.00

Treatment 2 ~ \$290.00

Ombre/Shading with Strokes

This involved treatment includes Microblading, shading between strokes and the ombre affect of colour being darker underneath and lighter on top.
